Beaded, the luminaire that floats in space

B.lux presents Beaded, a family of lighting fixtures designed by the renowned German designer Werner Aisslinger. The collection features two semi-spherical glass diffusers and a central metallic ring that covers the LED light source and is specially designed to prevent glare. The lightness of the wiring used in its manufacture gives the impression that the lighting fixture is floating in space.

The Beaded collection is a luminous universe full of dynamism and elegance, where minimalist design meets an iconic and sophisticated aesthetic. Its distinctive lighting elements are arranged freely, allowing for playful height variations and compositions that can be either meticulously ordered or more fluid and organic, seamlessly adapting to each space with harmony and character.

The diameter of the luminaire is 25 cm and the height is 15 cm. The collection includes a floor lamp, table lamp, wall lamp, and ceiling lamp, as well as three different suspension formats: horizontal suspension, single vertical suspension, and multiple vertical suspension. The glass diffusers, available in smoked grey or white opal finishes, transform the luminaire's perception depending on the material's transparency and depth. A versatile design that turns light into a decorative element in constant dialogue with its surroundings.

Suspension fixtures can be multiplied both horizontally and vertically, offering endless design possibilities. This, combined with the versatility of the collection, makes Beaded ideal for both Contract and residential projects.

Beaded is part of one of the latest decorative lighting collections that B.lux will showcase at the Salone del Mobile - Euroluce 2025. B.lux is a company from the Basque Country dedicated to manufacturing contemporary design luminaires since 1979.
