Tim Brauns designs Kupetz, a new modular lighting system, for B.lux

The new modular LED lighting system launched by B.lux bears the signature of the designer Tim Brauns, who has become a regular designer of the Basque lamp manufacturer. It is a suspension system called Kupetz, which enables the creation of endless volumes of organic shapes, with a single connection.

Kupetz has several accessories, enabling its expansion in height, length and width. It is a 3D lighting system made with different light sources and unions, and its arrangement allows you to adjust the lighting to each space.

It is a metal tubular system in matte black where you can combine four types of light sources: two opal white glass spheres (100 Glass and 150 Glass) and a spotlight with opal diffuser (Diffuser). These spotlights and the base of the glass spheres come in three different finishes: black, copper and gold.

Kupetz is part of the new collection of lighting systems introduced by B.lux at the 2022 Hábitat Valencia Trade Fair (FHV22). B.lux has been manufacturing and marketing lamps with a contemporary design from the Basque Country (Spain) since 1979. www.grupoblux.com
