Slim Skin, the new lamp designed by AIA Salazar-Navarro for B.lux that creates a moiré effect

B.lux introduces the new Slim Skin lamp collection, designed by the renowned design studio AIA Salazar-Navarro.

Slim Skin consists of an opaline cylinder covered by a metal mesh that creates a moiré effect, avoiding any glare and providing great visual comfort.

The collection includes a vertical suspension lamp, a horizontal suspension lamp, and a wall lamp. They all have a diameter of 12 cm and are available in two different heights: 70 cm and 150 cm. Slim Skin is made of aluminium, glass, and metal mesh and comes in two different finishes: black and brass.

The quality of the light makes the Slim Skin collection ideal for both residential and contract projects.

Slim Skin belongs to the new range of decorative lighting collections that B.lux will introduce at the Salone del Mobile - Euroluce 2023. B.lux is a manufacturer of contemporary design lamps and has been active in the Basque Country since 1979. www.bluxlighting.com.
