B.lux makes outdoor spaces more human with the LED Zenthin light

The design of the Zenthin outdoor light is based on Zenete, a lamppost included in the B.lux outdoor lighting catalogue, and was also designed by Martínez y Soler Arquitectos. They aimed to replicate the Zenete lamppost but in a more suitable size for private outdoor projects.

Similar to the Zenete light, Zenthin is made of corten aluminum and two of its sides are clad in panels made of ipe wood, that is perfect for outdoor use. The use of wood is in fact one of its most distinguishable features and this, along with its size, make outdoor spaces more human. One of the LED points has been shifted to light the wooden body of the lamp and therefore highlight the material.

One of the advantages of the Zenthin lamp has a fully embedded LED light source for a completely anti-glare lighting and better eye comfort. Zenthin comes as a floor lamp or as a wall lamp.

Zenthin is part of the new outdoor lighting collection launched by B.lux, who has been manufacturing lights in the Basque Country since 1979. www.grupoblux.com
