## **Blokinline: minimalist, customizable, and mobile linear lighting**

B.lux introduces Blokinline, a flexible and modular minimalist linear lighting system. It is based on an ultra-compact electrified track (6 mm x 16 mm), dimmable at 48V, allowing high-lumen lighting elements to be freely positioned along the track. This approach combines high-quality lighting with a modular system that offers great design freedom.

Blokinline includes opal glass spheres (100/150 mm), spotlights, direct light modules with 2 or 4 spots, and reflectors with different beam angles (38°/60°). It also features linear lighting elements that can be surface-mounted, suspended, or adjustable. The system integrates both high-performance technical light sources and decorative luminaires with a distinctive design, adapting to various lighting needs. Thanks to its mobile track system and a wide range of lighting elements, Blokinline allows for infinite and customizable compositions, making it a versatile solution for residential and contract projects alike.

Blokinline is made of aluminum, white opal glass, and specular aluminum reflectors. Light sources are available in brass, black, or white finishes. The system is offered in surface-mounted (ceiling and wall) and suspended versions, with 90° and 180° angles in horizontal or vertical orientations. It also includes curved sections with radii of 300 or 500 mm, enabling fluid, organic shapes.

The Blokinline collection is complemented by individual elements in various formats, maintaining aesthetic consistency without requiring a structural track.

Blokinline is part of the latest architectural lighting collections that B.lux will showcase at Salone del Mobile - EuroLuce 2025. B.lux, a Basque company, has been designing and manufacturing contemporary lighting since 1979.
