SIS: elegant and Customizable Modular Lighting System

SIS is a scalable ecosystem of low-profile luminaires, designed to provide spatial lighting through a compact 24V electrified track and high-lumen individual spots that can be freely positioned along the track.

The collection translates the concepts of modularity and flexibility traditionally associated with architecture into lighting design, offering dynamic and versatile solutions. Its modular system allows for the integration of high-precision light sources with advanced lenses or individual decorative elements, adapting to environments with high lighting requirements or spaces where aesthetics play a key role.

SIS includes various light sources: downlight spots with optics in different beam angles (24°, 36°, and 60°), adjustable projectors, and a decorative opaline glass spot. The system collection also includes an accessory made of ribbed glass, adaptable to the downlight spots. The light sources are available in brass, black, gray, and white finishes, while the track is available in black or white.

The SIS collection is also complemented by individual elements in various formats, allowing the aesthetic coherence of the system to be maintained without the need for a structural track, ensuring visual continuity and functionality in any configuration. It is a collection of direct lighting spots available for both suspended and surface-mounted installations.

SIS is part of the latest architectural lighting collections that B.lux will present at Salone del Mobile - EuroLuce 2025. B.lux is a Basque company dedicated to manufacturing contemporary design luminaires since 1979.
