Slim Skin F: New Floor Lamp with Moiré Effect

Born from the collaboration between B.lux and the renowned design studio AIA Salazar-Navarro, the Slim Skin decorative lighting collection was created. Now, B.lux presents Slim Skin F, a new version of the floor lamp.

Slim Skin defines the spirit of this collection with its very name: giving a slender light source different "skins," without the skin fully covering the diffused light it emits. Its light elements are made of transparent ribbed glass or an opaline cylinder. The former gives the whole piece a slimmer appearance, while the latter creates a more enveloping volume of light. The collection is covered by a metal mesh that generates a moiré effect, thus avoiding any glare and providing great visual comfort.

Slim Skin F is the new version of the floor lamp, with a diameter of 12 cm and a height of 151 cm. This new model completes the Slim Skin collection and adds to the versions of vertical suspension, horizontal suspension, and wall lamp. The quality of light emitted by the Slim Skin collection makes it ideal for both residential and contract projects.

Slim Skin F is part of the new decorative lighting innovations that B.lux will present at the Salone del Mobile - EuroLuce 2025. B.lux is a Basque company that has been dedicated to manufacturing contemporary design luminaires since 1979.
